

```

public class Example1{

    static int x = 0;

    public static void main(String[] args)
    {
        finish(() ->
            async(() -> //Thread1
                isolated(() ->
                    x++; //Isolated block s
                );
            );
        async(() -> { //Thread2
            isolated(() ->
                x++; //Isolated block s'
            );
        });
    }
}

```
